

HUBSPOT CRM / REVOPS

Lead qualification that turns a score into an action

Aster Growth Studio is a fictional business used for an independently built CRM implementation. The configuration and workflow were created in a live HubSpot developer test account; the people and commercial context are synthetic.

THE OPERATING PROBLEM

High-fit inquiries need a visible tier and a timed owner task.

System design

01 Capture

A structured contact form records service interest, lead-fit score and lead tier.

02 Qualify

A numeric threshold identifies a high-fit contact: score 70 or above.

03 Route

An active workflow sets the tier to High and creates a priority review task.

04 Review

The assigned owner receives a task due one business day later for a discovery call.

Scope

Contact data model / Creation form / Active automation / Synthetic test records

CONFIGURATION

A small, inspectable operating system

The fields encode the sales decision in the CRM instead of relying on a note or a spreadsheet.

Aster | Service Interest**DROPDOWN**

CRM Implementation; Automation & Integration; Analytics & Reporting; Marketing Campaigns

Aster | Lead Fit Score**NUMBER**

Threshold for priority routing: 70 or greater

Aster | Lead Tier**DROPDOWN**

High; Medium; Low

Automation / Aster | Prioritize high-fit leads

TRIGGER**Contact score ≥ 70**

Enrollment based on the custom numeric property.

ACTION 1**Set lead tier to High**

Makes priority explicit on the contact record.

ACTION 2**Create a high-priority task**

Owner: Ana Gomes. Due: one business day later.

Publication state

Workflow published and on. Re-enrollment off. Contact creation form includes all three properties.

OBSERVED IN HUBSPOT

From contact entry to assigned follow-up

Four fictional contacts were created manually. Email addresses use a reserved example domain. They were not marked as marketing contacts.

CONTACT	SCORE	INTEREST	OBSERVATION
Daniel Ortiz	84	CRM Implementation	High-fit route fired
Sofia Reed	58	Marketing Campaigns	Medium, assigned manually
Noah Brooks	32	Analytics & Reporting	Low, assigned manually
Maya Chen	—	Not entered	Record created; not scored

OBSERVED TEST / DANIEL ORTIZ

84 >= 70 → priority task assigned to Ana Gomes

The record activity shows the task was created by the named workflow.

Due: 30 Sep 2026, one business day after entry.

Verification note

The contact record now shows Score 84, Tier High and CRM Implementation together. Its activity timeline shows the workflow-created priority task due 30 Sep 2026.

LINKED RECORDS

A qualified lead becomes a reviewable opportunity

Aster Growth Studio is the developer account. Meridian Systems is a clearly fictional company created for this scenario; its contact and opportunity are linked in the CRM.

COMPANY

Meridian Systems (fictional)

Synthetic B2B software company, with a reserved example domain and 42 sample employees.

CONTACT

Daniel Ortiz

Founder; score 84; tier High; CRM Implementation interest; associated with the company.

OPPORTUNITY

CRM Implementation | Meridian Systems | Q4 2026

Sales pipeline stage: Qualified to buy. Owner: Ana Gomes. Linked to both contact and company.

SCENARIO VALUE

USD 24,000 / Target close: 27 Nov 2026

This is a fictional opportunity amount and target date, not revenue, a signed contract, a forecast validated by a client, or a conversion result.

What the linked model enables

An owner can inspect qualification, task, company context and open deal across related records. The workflow itself sets tier and creates a task; deal creation was performed separately and is not attributed to automation.

CAPTURED IN HUBSPOT

Published workflow and its actions

Screenshots from the logged-in developer account, 29 Sep 2026. The green “LIGADO” status and the score threshold are visible in the first view.

01 / Enrollment rule: score 70 or higher.

The active status is visible above the canvas. Re-enrollment is off. The next action sets the custom lead tier to High.

CAPTURED IN HUBSPOT

Two concrete workflow actions

The platform configuration shows the tier update followed by task creation. The record views on the next pages show the resulting state.

02 / Set High, then assign the discovery review task.

The task was assigned to Ana Gomes with a one-business-day due date. No messages were sent to fictional contacts.

CAPTURED IN HUBSPOT

Qualification visible on the contact

The custom sidebar brings the score, tier and interest into one view beside the pending follow-up. This is a fictional lead in a live developer account.

The screenshot displays the HubSpot CRM interface for a contact named Daniel Ortiz. The interface is divided into several sections:

- Left Sidebar:** Contains contact information including the name 'Daniel Ortiz', title 'Founder', email 'daniel.ortiz@aster.example.com', and a list of actions (Obse..., E-mail Cham..., Tarefa Reuni..., Mais). Below this, there is a section for 'Aster | Lead qual...' showing the contact's status as 'Lead' with a score of 84 and a tier of 'High'.
- Main Content Area:**
 - Resumo do registro:** A summary of the record generated on September 29, 2026, at 08:22. It mentions a high-priority task to review the lead and schedule a meeting by September 30, 2026, at 9h.
 - Perfil de contato:** A table showing contact details:

Nome da empresa	Endereço	Cidade
--	--	--
Código postal	Estado/Região	E-mail
--	--	daniel.ortiz@aste...
 - Feedback:** A section for feedback, including a 'Classificação de NPS média' (Average NPS Classification) with filters for 'Desde sempre' and 'Mensalmente'.
- Right Sidebar:** Contains sections for 'Empresas' (Companies), 'Negócios' (Business), 'Campanhas' (Campaigns), and 'Tickets'. Each section has a '+ Adicionar' (Add) button and a brief description of the related content.

03 / Score 84 → High → assigned task.

The score crossed the configured threshold and the saved tier value is visible on the record.

CAPTURED IN HUBSPOT

Opportunity linked to contact and company

A separate, manually created synthetic deal provides pipeline context. The screenshot shows the value, stage and linked records.

The screenshot displays the HubSpot CRM interface for a specific deal. The top navigation bar includes the HubSpot logo, a search bar, and various utility icons. The main content area is divided into several sections:

- Deal Overview:** Displays the deal name "CRM Implementation | Meridian Systems | Q4 2026", its value "Valor: US\$ 24.000", the target close date "Data de fechamento: 27/11/2026", the pipeline "Pipeline de vendas", and the current stage "Etapa do negócio: Qualificado para...".
- Insights de negócio:** A section providing business insights, including "Riscos" (No risks found) and "Metas do comprador" (No buyer goals found).
- Acompanhamentos sugeridos:** A section indicating that no suggested follow-ups are currently available for this deal.
- Pontuação do negócio:** A section for the deal's score and summary.
- Linked Records:** The right sidebar shows linked records for "Contato" (Daniel Ortiz) and "Empresas" (Meridian Syst...).

04 / Fictional USD 24,000 opportunity.

The target close date is 27 Nov 2026. This is a scenario record, not booked revenue.

PORTFOLIO USE

What this implementation proves

A working CRM design in a developer account, with an observed automation event and a documented boundary between implementation and client results.

IMPLEMENTED

Three custom contact properties, an adjusted creation form, a published workflow with two actions, four synthetic contacts, one fictional company and one linked deal.

OBSERVED

A score of 84 produced tier High and an assigned follow-up task for Daniel Ortiz in the CRM record.

NOT CLAIMED

No client engagement, revenue lift, conversion increase, production rollout, Marketplace app, custom CRM object or Salesforce expertise is claimed.

OPERATIONAL HANDOFF

In a client account: agree on scoring criteria, permission/consent rules, owner mapping, exceptions, reporting, and a measured pilot before launch.

UPWORK PORTFOLIO COPY

Independent HubSpot CRM implementation using synthetic records. I built custom qualification fields, a contact intake form and a live workflow that sets a High tier and assigns a priority task at score 70+. I verified the path on a score-84 contact, then linked a fictional company and opportunity for pipeline context. This developer-account project is not a paid client engagement or a claim of commercial results.
