

DEVELOPER EDITION / APEX + VISUALFORCE

Opportunity Command Center

A working Salesforce portfolio implementation that prioritizes open opportunities by data quality and overdue follow-up. Built and verified in a live Developer Edition using fictional scenario records.

THE OPERATING QUESTION

Which opportunities need attention first?

A read-only dashboard scores three concrete risk signals and exposes the reason to act on each record, beside the owner and close date.

OPEN DEALS

3

fictional records

OPEN VALUE

\$50,000

positive amounts

CRITICAL

1

two or more signals

ATTENTION

1

one signal

HEALTHY

1

no signals

What was built

01 Rule engine

Apex checks next step, close date and amount; severity is deterministic.

02 Live view

A responsive Visualforce dashboard reads the scoped CRM records.

03 Verification

Three automated tests passed; production Apex classes show 100% line coverage.

SYSTEM DESIGN

From records to a review queue

The rules are transparent and avoid writing to opportunity records. The page focuses on one fictional account so Developer Edition sample records do not distort the case.

01

CRM source

Open Opportunity records associated with Aster Portfolio Lab (fictional).

02

Access control

A with-sharing Apex class queries in user mode, respecting record and field access.

03

Classification

Each record gets 0-3 signals: blank Next Step, past Close Date, or Amount ≤ 0 .

04

Presentation

Five KPI cards and an ordered review table show owner, stage, value, date and reasons.

Severity policy

CRITICAL

2 or 3 signals

ATTENTION

1 signal

HEALTHY

0 signals

DESIGN BOUNDARY

Read-only and scoped by a named fictional account.

No automated task creation, AI forecast or client commercial result is claimed.

The daily date check can change a row as its target close date passes.

CAPTURED IN SALESFORCE

The implemented command center

Visible in the signed-in Developer Edition on 29 Sep 2026. The metrics and table are calculated from three fictional opportunities created for this case.

Observed scenario

Critical At-risk renewal: overdue close date, blank next step, invalid amount.

Attention Proposal handoff: blank next step.

Healthy Discovery expansion: no rule violations.
Open values in the screenshot are synthetic opportunity amounts, not revenue.

OBSERVED TESTS

Verified in the same organization

The Developer Console ran two rule-engine tests and one integration test. All completed with zero failures; coverage was refreshed after the final query change.

3 TEST METHODS

0 FAILURES

100% COVERAGE

AsterPipelineController: 47/47 lines

Page controller: 3/3 lines

The screenshot displays the Salesforce Developer Console interface. The top pane shows the Apex code for the `AsterPipelinePageControllerTest` class, which includes a `readOnlyPortfolioAccountAndMemoizesSummary()` method. The bottom pane shows the 'Tests' tab with a table of test runs and an 'Overall Code Coverage' table.

Status	Test Run	Enqueued Time	Duration	Failures	Total
✓	TestRun @ 9:05:11 am			0	2
✓	TestRun @ 12:27:02 pm			0	2
✓	TestRun @ 12:32:16 pm			0	1

Overall Code Coverage		
Class	Percent	Lines
Overall	100%	
AsterPipelineController	100%	47/47
AsterPipelinePageController	100%	3/3

What the tests cover

Classification Critical, Attention and Healthy, correct total, reasons, and no mutation.

Empty state No records yields zero counts and a safe empty list.

Integration Included and excluded accounts; the scoped query, amount and memoized page summary.

DELIVERY

How to present this work

A working developer-org project with reproducible source code. The records and business names are fictional; it is an independent portfolio case, not a paid customer engagement.

INCLUDED IN SOURCE

Apex rule controller; page adapter; three test methods across two classes; Visualforce page; sample data script and metadata.

OBSERVED IN ORG

Three scenario opportunities; dashboard with 3 / \$50,000 / 1 Critical / 1 Attention / 1 Healthy; 3 passing tests and 100% line coverage of the two production classes.

NOT CLAIMED

Production rollout, client KPIs, booked revenue, Agentforce or Data Cloud integration, Salesforce certification, or deployment of the earlier LWC prototype.

Suggested Upwork portfolio title

Salesforce Opportunity Health Dashboard | Apex + Visualforce

READY-TO-USE DESCRIPTION

I built a live Salesforce Developer Edition dashboard that reviews open opportunities for missing next steps, overdue close dates and invalid amounts. A read-only Apex controller classifies each deal as Critical, Attention or Healthy, and a responsive Visualforce page shows the reason to act. The portfolio scenario uses three fictional opportunities under a dedicated sample account. Three automated tests passed with zero failures and 100% line coverage across the two production Apex classes. This is an independent implementation, not a client project or claim of commercial results.

Practical review path

Open AsterPipelineConsole in the signed-in Salesforce Developer Edition, then inspect the provided source package and test class names. Access depends on org authentication and permissions.
