

Account intelligence for a B2B service market

A working prospect research system built inside a Zoho CRM account.
Public company research becomes a traceable, reviewable sales queue.

10 COMPANY ACCOUNTS

01 SAVED QUEUE

LIVE CRM VIEW

The screenshot displays the Zoho CRM interface. On the left is a dark sidebar with navigation menus for 'Vendas' (Sales), 'Atividades' (Activities), and 'Estoque' (Inventory). The main area is titled 'Contas' (Accounts) and shows a list of 10 company accounts. A search bar at the top right allows for searching records. Below the list, there are filters for 'Filtrar Contas por' (Filter Accounts by) and 'Filtrar por campos' (Filter by fields). The table columns include 'Conta Nome' (Account Name), 'Site', 'Research Tier', and 'Research Status'. The status for all accounts is 'Account researched'.

Conta Nome	Site	Research Tier	Research Status
Hermanos Barbershop	https://hermanos.co.za/	B	Account researched
Hair City	https://www.haircity.co.za/	A	Account researched
Sirina Thai Spa	https://sirinathaispa.co.za/	A	Account researched
Legends Barber	https://www.legends-barber.com/	B	Account researched
Life Day Spa Group	https://lifedayspa.co.za/	A	Account researched
Camelot Spa Group	https://www.camelotspa.co.za/	A	Account researched
Perfect 10	https://www.perfect10.co.za/	B	Account researched
Sorbet	https://www.sorbet.co.za/	A	Account researched
being	https://www.being.co.za/	A	Account researched
Barber Club	https://www.barberclub.co.za/	A	Account researched

Implemented in the account • 29 Sep 2026

Independent portfolio build using public business information. No client engagement is implied.

From research to a usable CRM queue

Every account retains a source URL and a distinct research status.

03

REVIEW

Saved operational view
10 records with A/B priority

WHAT WAS VERIFIED IN ZOHO

- 10 imported Account records, with duplicate checking based on Account Name.
- Five text fields created: Research Market, Research Tier, Booking Signal, Evidence URL and Research Status.
- Saved view “Fieldwork B2B Research Queue” filters Account researched records.
- No personal contacts, fabricated buyers, outreach emails or sales results.

The A/B tier describes research priority, not purchase intent or a verified lead.

A credible case, with clear boundaries

LIVE IN THE ZOHO ACCOUNT

Company records and public source links

Custom qualification fields

Saved research queue and status filter

Import verification: 10 accounts

NEXT VALIDATION MILESTONE

Internal follow-up workflow is not saved yet.

Its trigger and task still require a live test.

Dashboard and conversion claims are excluded.

No outbound automation has been activated.

UPWORK PORTFOLIO DESCRIPTION

I built a Zoho CRM account research queue for a service-sector B2B prospecting scenario. The implementation imports 10 publicly researched businesses, adds source and qualification fields, and creates a filtered view for human review.

The workflow separates account discovery from buyer verification, so the team can prioritize research without treating unverified companies as sales leads.

Portfolio demonstration built in my own CRM organization, using public company data.
